

Nitric Acid 55 - 57 %

Nitric acid is used in metallurgy and refining, as it reacts with most metals and in chemical synthesis. It is used as a laboratory reagent and to make explosives such as nitroglycerin and trinitrotoluene (TNT), as well as fertilizers such as ammonium nitrate. In the electronics industry, it is used in the production of printed circuit boards (PCBs). In the pharmaceutical industry it is used as a separating agent for highly basic compounds in organic media.

SPECIFICATIONS

PARAMETER	VALUE
Concentration	55 - 57 %
Sulfates	5 ppm MAX
Chloride	1 ppm MAX
Iron	3 ppm MAX
Relative density (20°C)	1.3390 - 1.3510 g / ml
Physical state	Liquid
Color	Transparent
Odor	Suffocating
